Dr. K. Dhanadiyya**COVID 19 INFECTION-PREVENTIVE GUIDELINES**

All Dental clinics are advised to follow the necessary precautions on the outbreak of Covid 19 viral infection. It should be noted that the incubation period is around 14 days, so the patient or the by attender may be asymptomatic when he comes to your clinic.

. Verify with each patient if they have any symptoms like fever, cough, running nose, sneezing.

. Verify with patient if any of them or their family members have had any foreign tours and if so, have they reported to health officials.

. It is mandatory to have contact details and proper documentation of each patient who comes to your clinic for treatment.

. If you identify or suspect any patient with any symptoms like fever, headache, drowsiness etc for past few days refer them for a proper medical check and care.

. Avoid or postpone treatment of people with above mentioned symptoms

. Treatment like surgical extractions, incision and drainages of abscess etc to be done with extra precautions.

. Use three layered masks .

. Use hand wash after each treatment, followed by hand sanitizer and surface disinfectants.

Hand Sanitisers: Preferably chlohexaidine with alcohol based or alcohol based(hand rub solution)

Environmental Surface disinfection: Preferably Accelerated hydrogenperoxide(0.5%) Benzalkonium chloride(0.05%)/Ethyl alcohol(70%) Isopropanol(50%) Sodium hypochlorite(0.05-0.5%) is very effective against corona viruses.

. Important points to note when using disinfectants: Check the labels & use according to the instructions .Aware of the potential hazard of each product.Avoid contact with eye and skin when handling cleaning products. Keep them away from children.Do not mix different cleaning products. Use in a well ventilated areas.

For disinfection of highly contaminated surfaces or material, avoid the use of spray, and allow appropriate time needed for disinfection(refer to respective product instruction)

Dr. Meenakshi Muthukumar
President
Dr. A. P. Maheshwar
